

Curbside Composting Comes to the JAMF Software Eau Claire Campus

Earthbound Environmental Solutions, LLC, in partnership with JAMF Software, is pleased to announce the launch of an expanded organics recycling program at the company's Eau Claire location located at 215 Riverfront Terrace.

JAMF has long been composting traditional materials such as coffee grounds, filters, and cafeteria waste. JAMF's expanded program launched Dec. 2015.

Earthbound's principal owners noted that this movement, towards a wider swath of materials recycled organically “represents a paradigm shift in how we address our needs and how we will address the needs of future generations as it relates to sustainable waste management practices.”

The expanded initiative encompasses uncommon items such as brown paper towels, material waxed cardboard products, and compostable paper products. A unique feature of the expanded organics recycling targets bathrooms, which generate a significant amount of compostable paper waste.

Earthbound believes that leaders in the business community such as JAMF play a critical role in supporting local efforts to bring initiatives like this to fruition.

JAMF staff person Greg Haugen noted “JAMF Software and Earthbound make a natural partnership with similar vision and goals about community involvement.”

Through JAMF's leadership, other non-traditional businesses will understand that organics recycling isn't just for restaurants.

Inquiries about Earthbound's organics recycling services can be sent to info@earthboundenviro.com
